

This product is commonly used to detect the presence of larger quantities of free water than would be sought with Shell Water Detector capsules. It is suitable for detecting free water in small tanks and in the bottom of fuel samples. The water finding paper is coated with a brown coating which stays in place when the paper is immersed in fuel, but is removed by any water which may be present, hence exposing the white base underneath.

This product comes in plastic tubs of 200 strips per tub, each strip measuring 140mm by 10mm, and each tub is fitted with a sealed cap to prevent water ingress and consequent deterioration of the contents.
